

Classroom and Laboratory Addition El Paso Community College

CLIENT

El Paso Community College

LOCATION

El Paso, TX

ROLE

Project Management

COST/SIZE

\$5.1 Million
24,747 SF

ECM provided Project Management Services on the El Paso Community College District (EPCC) for their 2016 Bond Program; a \$125 million-dollar effort that includes six construction projects across their 5 campuses, totaling over 425,000 SF

This project was a 24,747 SF addition to an existing single-story educational facility. The focus of this expansion was to create additional classrooms as well as essential student study and collaboration spaces. As with all of the various EPCC projects, the addition allowed for the expansion of high-demand curricula and amenities. The Transmountain campus features dedicated Fashion Design and Interior Design and an associated computer lab. The project also included general purpose classrooms, computer lab, student study and gathering spaces, faculty office, and collaboration areas as well as two large outdoor gathering spaces, building technology, and building-wide wifi access.

ECM provided Program Management services from initial budget planning and scheduling through procurement to full-time construction management and move-in.
