Classroom and Laboratory Building El Paso Community College

CLIENT

El Paso Community College

LOCATION

El Paso, TX

ROLE

Project Management

COST/SIZE

\$36 Million
106,000 SF

The Valle Verde Campus is the largest and most centrally- located facility in the El Paso Community College District. The Valle Verde Arts, Science, & Technology (AST) Building is one of six projects in the 2016 Master Plan Bond Program, and ECM was selected to manage the Bond Program and its various projects.

The new facility was designed to be a significant addition, both academically and architecturally. This new three-story facility offers students and staff state-of-the-art flexible research and learning laboratories, innovative learning spaces, and collaborative interaction spaces. While the facility was intended to meet many unique spatial needs for various programs, it also embodies the vision for the future of the campus to continue fostering collaborative educational excellence.

Additional labs for Biology, Astronomy, and chemistry were included at this facility. The mix of science laboratories, computer laboratories, classrooms, gathering spaces, 300-seat community rooms, and engaging learning spaces facilitate a fusion between various programs. This building is poised to become the hub for students, instructors, staff, and the surrounding community.
