

## IH-10 Airway Aesthetic Improvements Camino Real Regional Mobility Authority

### CLIENT

Camino Real Regional Mobility Authority

### LOCATION

El Paso, TX

### ROLE

Project Management

### COST/SIZE

\$ 7 Million

The high profile Airway Aesthetic project consists of a series of artistic, and functional, modern wind sculptures at the busy Interstate 10 and Airway Boulevard interchange. This location is a major gateway to El Paso as travelers from the El Paso International Airport use the interchange to access IH-10. This art component is the highlight of an ongoing aesthetic improvement in this busy transportation corridor.

The sculpture was designed by artist Vicki Scuri and features an assortment of 50-foot tall wind turbines and ground-level sculptures that illuminate at night. The sculptures are designed to resemble desert plants and contain programmable LED lights that change colors based on upcoming seasons or community events. Other elements include pedestrian amenities, decorative painting and landscape.

ECM provided Project Management services for this award-winning project and coordinated efforts with numerous firms and agencies including the Texas Department of Transportation (TxDOT), Keep El Paso Beautiful (KEPB), the Camino Real Regional Mobility Authority (CRRMA).
